

Historical and Projected Kansas Feedlot Net Returns

August 2013

Glynn T. Tonsor and Kevin C. Dhuyvetter (Kansas State University)

This short article presents estimated net returns of cattle finishing operations as of August 5, 2013.

The process of calculating historical net returns and projecting future net returns was updated in July of 2012.¹ Each month updates are made to reflect the most recent feedlot closeout estimates and to reflect current market conditions.

Close-out Calculations

The most recent *Focus on Feedlots* survey provides information on lots closed out in June of 2013. As shown in figures 1 and 2, steers and heifers were estimated to be sold in June at significant losses (-\$211.00/hd and -\$178.65/hd, respectively).

Projected Returns

Given the one-month lag in *Focus on Feedlots* survey information, market information is available for July of 2013 but realized animal performance data are not yet available. Currently, the net returns projected for closeouts in July are -\$158.61/hd and -\$181.87/hd for steers and heifers, respectively (tables 1 and 2). Tables 1 and 2 also present projected net returns for closeouts over the next five months based on forecasts of both animal performance and market prices. These tables also include the projected and breakeven values for cattle prices and cost of gain which provide further insight into the sensitivity underlying these projections. Producers are encouraged to carefully compare their own costs and prices with those reported here. The projections included in tables 1 and 2 suggest returns are expected to improve in coming months reflecting reduced costs of gain and higher fed cattle prices. Finally, historical and breakeven values are provided in chart format revealing trends over time in fed cattle sales prices (figures 3 and 4), cost of gain (figures 5 and 6), and feeder cattle purchase prices (figures 7 and 8).
