The risk of loss in trading futures, options, forward contracts, and hedge-to-arrive can be substantial and no warranty is given or implied by the author or any other party. Each farmer must consider whether such marketing strategies are appropriate for his or her situation. This web page does not represent the views of Kansas State University.

### **Estimated 2014 ARC-CO Wheat Payments Kansas and Oklahoma<sup>1</sup>**

The National Agricultural Statistical Service (NASS) has released 2014 wheat yields for some counties. The estimated Agricultural Risk Coverage-County (ARC-CO) payments in Table 1 are based on the NASS harvested yield and the KSU estimated 2014/15 Marketing Year Average (MYA) wheat price<sup>2</sup>. The Farm Service Agency (FSA) will use the harvest yield plus failed acres to set the 2014 county yield used to calculate ARC-CO payments. Therefore, this approach of using harvested yields will understate the size of some payments, but in some cases the payment is really deep in the money so the payment is at the maximum, i.e. 10% of the reference revenue. Those counties with deep in the money ARC-CO payments, will collect even if the forecast is off.

The estimated reference revenue for next year is based on the 2014 NASS county yield and T-yields. KSU has estimated T-yields for Kansas wheat, but not other states. The estimated reference revenue will tell Kansas wheat farmers if the 2015/16 guarantee is likely to be higher or lower next year, because the guarantee is 86% of the reference revenue.

---

<sup>1</sup>Prepared by G. A. (Art) Barnaby, Jr., Professor, Department of Agricultural Economics, K-State Research and Extension, Kansas State University, Manhattan, KS 66506, January 20, 2015, Phone 785-532-1515, e-mail – [barnaby@ksu.edu](mailto:barnaby@ksu.edu).

<sup>2</sup>The MYA price is a NASS national survey based price by month that is then weighted by the percent of the total crop sold in that month. This price is not a futures price, not a crop insurance price, and not a local elevator cash price. This is not the price at harvest that is often lower than the MYA price. One will also see the MYA price labeled by USDA and marketing analysis as the "Farm Price".

The 2015/16 ARC-CO guarantee will be set based on the Olympic MYA average price and Olympic average county yields during the most recent 5 years, 1010-2014 years. If any historical price is below the reference price then it is replace with the reference price before calculating the Olympic average MYA price. If any historical county yield is below 70% of the T-yield then it is replace with 70% times T-yield before calculating the Olympic average county yield. The 5 year Olympic average price times the 5 year average Olympic will generate the reference revenue times 86% sets the ARC-CO guarantee. The Kansas T-yields are an estimate but should be very close to final T-yields.

The T-yield provides a floor in the county yield. Because KSU only has an estimate for Kansas T-yields, the estimate for next year's ARC-CO guarantee is understated for other states. If FSA were to release the official T-yields that would allow one to calculate the next year's ARC-CO guarantee with a yield floor for other states.

The results in Table 2 & 3, shows how many counties are missing NASS county yields for year 2014. Those missing county yields will be filled in by FSA at a later date. Missing data is compounded by the fact that some counties have the yield split by irrigated and non-irrigated. In some cases NASS has only one county yield that is not split by practice as required by FSA. For example, Oklahoma NASS reports no wheat yields by practice.

In the past, FSA used crop insurance to determine the failed acres. This Law encourages FSA to use the crop insurance data in addition to the survey data provided by NASS.

The current 2014/15 MYA price estimate is \$6.13; that will not be final until the end of May and published by USDA on about July 1, 2015. The Price Loss Coverage (PLC) program pays the difference between the reference price, \$5.50 for wheat, and the MYA price. Based on a nearly completed MYA wheat price by March 1 that is weighted, the chances of a 2014 PLC wheat payment is near zero. Ruling out any wheat PLC payments for 2014 is true for the entire country, because the commodity program only uses the one national average wheat price that combines all classes of wheat. Remember the reference price of \$5.50 is locked in for the 5 year life of the commodity program. So it is possible there might be PLC payments in the remaining 4 years. Once farmers select their commodity program they are locked in to that decision for the life of the Farm Bill.

Atchison County had a wheat yield greater than the Olympic average yield of 43 bushels. The 53 bushels estimated for 2014 is high enough to eliminate any wheat ARC-CO payments in Atchison. However in counties with low county yields ARC-CO payments will be made on 2014 wheat. For example Barber County has a 13 bushel harvested yield for 2014, and when adjusted for failed acres will likely be lower. However, it will not change the results because the calculated payment of \$111.40 is stopped out at 10% of the reference revenue, or \$22.22. So even with large errors in the price or yield estimate, the payment will still be \$22.22 (Table 1).

Cowley County's estimated ARC-CO payment is less than the maximum of \$25.30 payment. The calculated payment is \$9.16, therefore any change in the price or 2014 county yield will affect the payment (Table 1).

Results for Kansas counties that NASS has reported yields for 2014 are in table 2.

Results for Oklahoma counties that NASS has reported yields for 2014 are in table 3. In some cases the estimated reference revenue and guarantee for next year are understated because KSU doesn't have a good estimate for the Oklahoma T-yields.

KSU will update these estimates with new prices and T-yields when released by USDA. While we don't expect any more county yields to be released for 2014 wheat, we will update the tables if that should occur. Check back for the addition of new states and updates to tables.
