

Estimates of Corn Production and Yields Based on 8/11/25 Crop Conditions

Gregg Ibendahl
August 16, 2025

Abstract¹

This reports estimates corn yields for the 18 leading corn states and then calculates total corn production and average national corn yield using the August NASS crop acre estimates. Based on the 8/11/25 crop condition report, total corn production is estimated to be 16.8 billion bushels with a range from 16.4 billion to 17.1 billion bushels. The national corn yield is estimated to be 188.2 bu/ac with a range from 184.2 to 192.3 bu/ac.

Introduction

This estimate is based on the USDA estimate of crop conditions for 8/11/25 (week #32). For a full description of this procedure and model, readers are encouraged to read "[Estimates of Corn Production and Yields Based on 6/30/24 Crop Conditions](#)".

USDA/NASS released the [August Crop Production Report](#) this past week. USDA revised corn acres upward by 2% and these new acre estimates are incorporated here. For comparison, USDA/NASS is currently estimating a 188.8 bu/ac national corn yield.

Results

Figure 1 is a Likert graph of the corn crop conditions for the last 20 years in the U.S. The Likert graph is centered on the fair category to make comparisons among years easier. The number along the left-hand-side of the figure is the total of the very poor and poor categories while the number along the right-hand-side is the total of the good and excellent categories.

Figures 2, 3, and 4 show the estimated yield per harvested acre, the estimated harvested acres, and the total production for each of the 18 leading corn states. The harvested acre estimate comes directly from the USDA-NASS estimate from the August 12, 2025 Acreage Report.

Because the yield per acre from the individual states can't be summed together, the national yield per acre is calculated from the total production divided by the total harvested acres. Total U.S. corn production is calculated by adjusting the production from the 18 leading corn states upward based on the historic relationship between U.S. production and the production from the 18 leading corn states. As calculated, total U.S. corn production is estimated to be 16.78 billion bushels with a range from 16.42 billion to 17.15 billion bushels. The national corn yield is estimated to be 188.2 bu/ac with a range from 184.5 to 192.3 bu/ac.
