

Estimates of Corn Production and Yields Based on 7/14/24 Crop Conditions

Gregg Ibendahl

July 15, 2024

Abstract¹

This reports estimates corn yields for the 18 leading corn states and then calculates total corn production and average national corn yield using the recently released NASS crop acre estimates. Based on the 7/14/24 crop condition report, total corn production is estimated to be 15.1 billion bushels with a range from 14.8 billion to 15.5 billion bushels. The national corn yield is estimated to be 181.3 bu/ac with a range from 177.0 to 185.6 bu/ac.

Introduction

This estimate is based on the USDA estimate of crop conditions for 7/14/24 (week #28). For a full description of this procedure and model, readers are encouraged to read “Estimates of Corn Production and Yields Based on 6/30/24 Crop Conditions”

Results

Figure 1 is a Likert graph of the corn crop conditions for the last 20 years in the U.S. The Likert graph is centered on the fair category to make comparisons among years easier. The number along the left-hand-side of the figure is the total of the very poor and poor categories while the number along the right-hand-side is the total of the good and excellent categories.

Figures 2, 3, and 4 show the estimated yield per harvested acre, the estimated harvested acres, and the total production for each of the 18 leading corn states. The harvested acre estimate comes directly from the USDA-NASS estimate from the June 28, 2024 Acreage Report.

Figure 5 projects a national yield per acre for each week with a crop condition report. Because the yield per acre from the individual states can't be summed together, the shown yield per acre is calculated from the total production divided by the total harvested acres. Total U.S. corn production is calculated by adjusting the production from the 18 leading corn states upward based

on the historic relationship between U.S. production and the production from the 18 leading corn states. As calculated, total U.S. corn production is estimated to be 15.13 billion bushels with a range from 14.77 billion to 15.49 billion bushels. The national corn yield is estimated to be 181.3 bu/ac with a range from 177.0 to 185.6 bu/ac.
